

## ClearView Infusion Pump Shield

### PTI-CIPF      ClearView Infusion Pump Shield

Clearview shields protects workers against gammas, betas, and neutrons during high-dose, high-risk jobs. Lead glass infusion / injection shields offer minimal lead equivalency and lead shield obstruct the viewing ability of a nuclear medicine technician or radiopharmacists. The ClearView Infusion Pump Shield is designed to reduce technologist exposure during the injection of radionuclides that require a very slow infusion protocol. The ability to see the infusion process clearly allows hospital staff to be at a distance or view the process through a camera.

#### Specifications:

- 1" Thick ClearView, 0.35" lead equivalency
- Fits Medfusion, Graseby, Moog Pumps
- Weight: 125 lbs
- Footprint: 21" x 16"
- Must be stored at minimum of 60° F
- Inner Diameter: 11"
- Length (tray in): 23.38"
- Length (tray out): 36"
- 6mm acrylic housing
- Effectively blocks Beta emissions
