FOCUSED ON THE ESSENTIALS

EASYONE is currently the simplest synthesizer to operate in routine productions of tracers labelled with radiometals.

Ready-to-use consumables and predefined synthesis process ensure quality and reproducibility of each production with constent yields. All consummables are manufactured in compliance with applicable standards.

COST-EFFECTIVE SOLUTION

EASYONE's quick set-up of affordable consumables will save technologist's time. Its short and efficient synthesis maximizes yields.

COMPATIBLE WITH ALL GENERATORS

EASYONE can be associated with any commercial ⁶⁸Ga generator: IRE-Elit, E&Z, iThemba, ITG, Pars Isotopes.

A compatibility set allows easy connexion of each generator model to Easyone.

EASY SETUP

User-friendly slip & start cassettes and reagent kits with color-coded containers allow a fast set-up. Cassettes are supplied ready to use in sealed pouches.

RFID label enable the automatic traceability of the consumables and the automatic selection of the corresponding synthesis sequence.

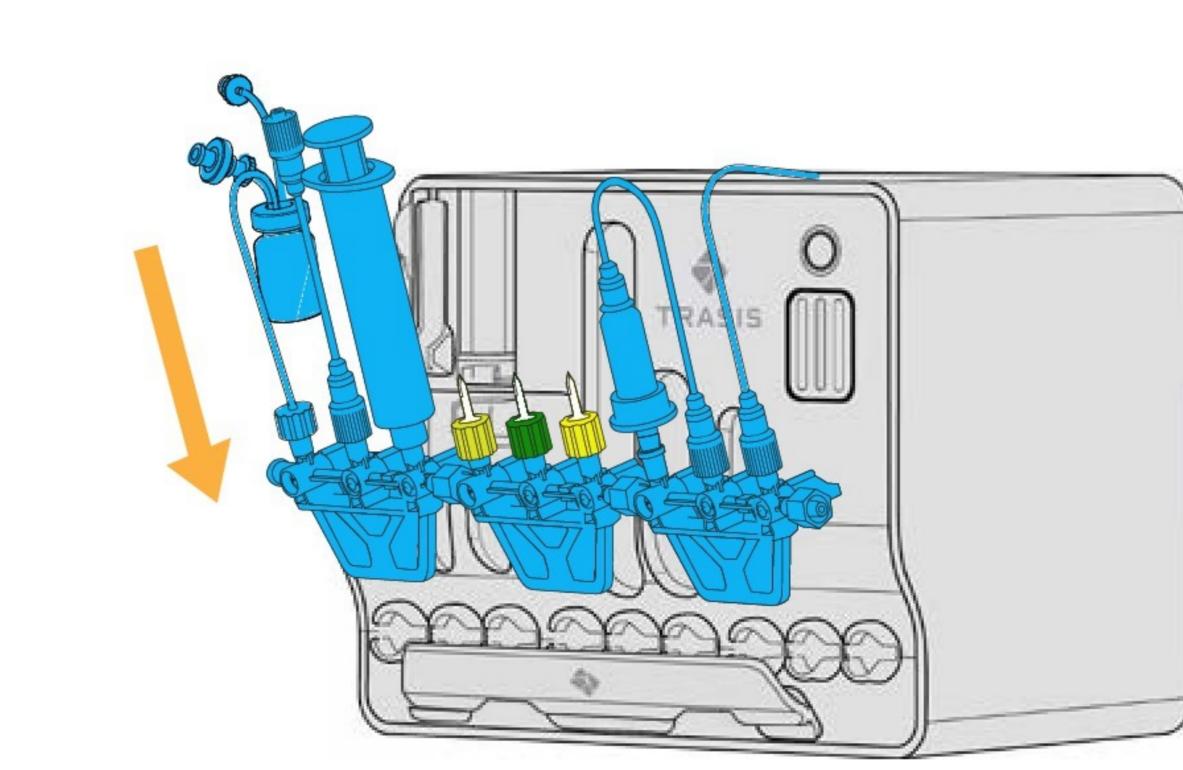

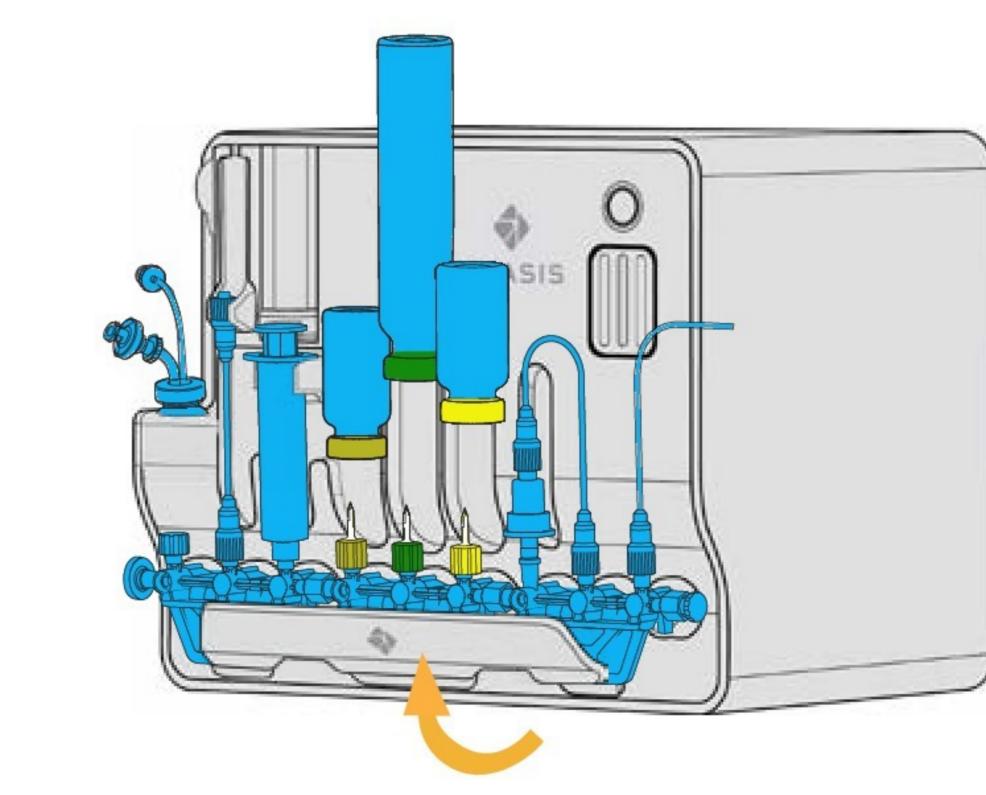

SLIP & START CASSETTE SYSTEM

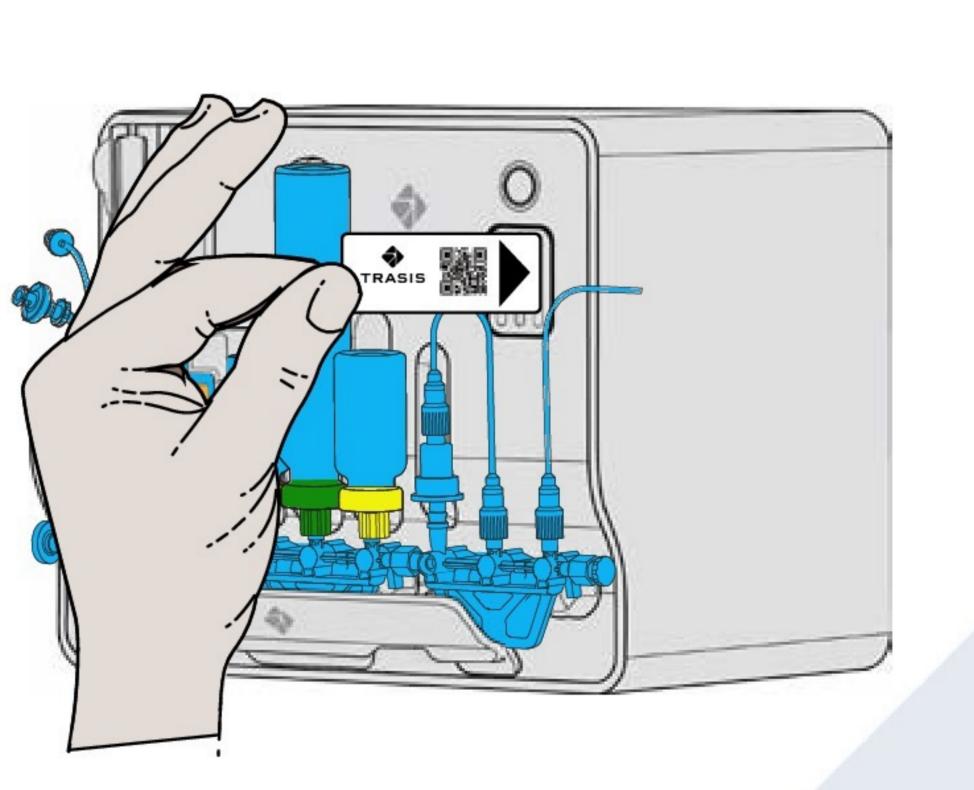

Take the cassette for the intended production (68Ga PSMA for example), drop it in the loading tray.

Tilt up the cassette and snap it in place. It automatically locks. Plug the colored coded vials on the matching positions.

Insert the RFID labels in the slots. EASYONE is ready to start!
